PALM DONE RIGHT® PROMISE

For all Palm Done Right Partners, Growers, Processors, Brokers, Distributors, Manufacturers, Retailers, and Shoppers

1 100% ORGANIC

Organic agriculture is essential to securing healthy resilient ecosystems.
That is why we use 100% organic practices. Using organic practices means natural compost and pest control replace the use of chemical inputs, cover crops are used to keep the soil healthy, and native trees are replanted to create buffer zones to prevent any contamination. **Palm Done Right** is fully traceable and guarantees maximum transparency as to where and how the palm oil is produced.

2 DEFORESTATION-FREE

To date 2 billion hectares of land has been degraded worldwide.
We need to eradicate deforestation and degradation from our supply chains.
We commit to no deforestation. We operate a strict Forest Conservation policy that prohibits the conversion of primary and secondary forests into agricultural production areas, tree plantations, or other degenerating land uses. Our policy stipulates precautionary actions for forest preservation and zero burning practices.

3 WILDLIFE FRIENDLY

Species diversity is crucial to preserving our living planet for future generations.
Conserving fauna and flora ensure ecological balance and stability in the world. We support and train farmers to manage their plantations and surrounding conservation areas such that animals will continue to thrive, and species diversity is secured.

4 FAIR & SOCIAL

Every person around the world deserves to be treated with dignity and equality.
We provide economic and social benefits to growers, workers and communities where we operate. This means respecting their rights and paying fair prices and wages. Through community projects we support education, healthcare and cultural activities.

Palm oil is here to stay. It is the most productive and efficient vegetable oil crop. Palm oil enhances the quality and performance of the food, personal care and household products we use on a daily basis. **Palm Done Right** is the sustainable palm oil solution.
